MATRYCS

Modular Big Data
Applications for
Holistic Energy
Services in Buildings

FINGERPRINTING AND BALANCING OF BUILDINGS ENERGY VECTORS

OBJECTIVES

- To automate a real-time energy operation and planning of buildings
- To achieve operational efficiency, effective maintenance, and sustainable action plans for different types of building facilities
- To improve the energy operation and planning processes towards energy and cost savings

ANALYTICS SERVICES

- Building Automation and Control
- Energy Prediction
- Technical Building Management

TARGET AUDIENCE

- Facility Managers
- Building Owners
- Building Tenants

BENEFITS

We aid the traditional monitoring of buildings' systems leveraging data-driven solutions and thereby add value to a holistic Building Management System (BMS).

We provide efficient and effective centralised management of operational subsystems coordinated on a system level.

With a next generation BMS we improve operation efficiency for various energy vectors and scopes of the facility management chain.

We leverage energy KPIs for decision making support on planning and designing actions to tackle carbonisation and climate change.
